As raw water cannot be used before treatments, so this **underground sewage treatment plant** plays a very important role in offering fresh water to the consumer.

Domestic waste water management system of any city consists of collection. Treatment and disposal in **conventional centralized sewage treatment system**, about 80% of the cost is accounted for the collection. The cost of collection of sewage and its conveyance to the terminal point in the large cities is very high. Further, the depth of sewer goes on increasing with the increase of length of sewer line and pumping of the sewage at the intermediate and terminal points requires a lot of energy.

Underground Sewage Treatment Plant

Shubhams **underground sewage treatment plant** is ideal for small communities; apartment and condominium complexes where space is limited and aesthetics are a top concern.
